

Declaration of recycled content

Knauf Danoline acoustic gypsum tiles and boards are produced with a high amount of recycled content. The gypsum core consists of up to 40% recycled gypsum, including gypsum waste from construction sites (defined as post-consumer waste) and waste from manufacturing processes (defined as pre-consumer waste). The cardboard liner is produced with a high amount of waste paper.

Depending on the amount of recycled gypsum available on the market, the composition of gypsum can vary over a year. The recycled material content is stated as an average proportion for the production year.

Knauf Danoline production year 2024 (jan-aug)

Material	Weight-% per unit	Recycled material, weight-%	-Hereof post-consumer waste, weight-%
Gypsum	>79	33	25
Paper	4-5	>90	0
Additives	<5	0	0
Water	10-13	0	0
